

## Executive Summary

A national study of Canadians suggests that the vast majority of Canadians (eight of ten) would favour a path forward which favoured neither foreign- nor Canadian-owned telecommunications companies in the government auction of the airwaves.

Respondents are clearly more likely to think that Canadian companies would do a better job at creating jobs, investing and providing rural service compared to foreign companies by a margin of about seven to one.

Two of three Canadians are satisfied or somewhat satisfied with the value they receive for wireless service compared to one in four that are dissatisfied or somewhat dissatisfied with the value of the service they receive.

Although price is an important aspect of their wireless service, Canadians clearly believe that lowering wireless service prices is not as important (7 percent) a government priority compared to lowering gas prices (45 percent) or college/university tuition (33 percent).

If the government were to create an advantage in the marketplace, respondents preferred that the government favour Canadian over foreign-owned companies.

## Contribution to economy

QUESTION - Would you say that the following industries in Canada make an important, somewhat important, somewhat unimportant, or unimportant contribution to the future strength of the Canadian economy? [ROTATE]

More than eight of ten Canadians thought the wireless telecommunications industry was making an important or somewhat important contribution to the future strength of the Canadian economy. The industry was only noticeably outpaced by the oil and gas and agriculture industries.

## Possible federal government priorities

QUESTION - Please rank your first and second priorities for the federal government from the following list. [Rotate list] [FIRST RANKED CHOICE]

Lowering the price of gas and lowering college/tuition fees were significantly more likely to be viewed as priorities for the federal government compared to the lowering wireless phone service prices.

## Government's role in the marketplace

QUESTION - Thinking in terms of competition generally, should the Government of Canada create an advantage in the marketplace for Canadian-owned companies, foreign-owned companies, or neither?

In general terms, Canadians would strongly prefer that the government provide advantage to Canadian-owned companies by a very significant margin. Less than two percent of respondents thought foreign companies should be favoured while the rest said neither should be favoured.

## Two-thirds satisfied with value of wireless

QUESTION - Are you satisfied, somewhat satisfied, somewhat dissatisfied or dissatisfied with the overall value you receive from your wireless service?

Two of three Canadians were satisfied or somewhat satisfied with the value of the service they received compared to only one in four that were dissatisfied or somewhat dissatisfied.

# Price is most important aspect of wireless service 

QUESTION - [exclude those without wireless] Which of the following aspects of your wireless service is the most important for you?

Price is clearly the most important aspect of the wireless service followed by network coverage, customer service and network quality.

## Creating jobs, investing and rural service

Creating jobs in the wireless
telecommunications sector in
Canada

Making long-term investments in Canadian wireless networks and infrastructure

Providing wireless communications products and services to Canadians living in rural areas

- Canadian-owned would do better - Foreign-owned would do better - Neither would do better Unsure

QUESTION - Our next few questions are about Canadian-owned and foreign-owned companies that provide wireless telecommunications products and services such as cellphones, smartphones, tablets and wireless Internet data plans. For each of the following, l'd like you to tell me whether a Canadian-owned company or a foreign-owned company would do better. [ROTATE Q16 TO Q18]

By approximately a margin of seven to one, Canadians are more likely to believe that a Canadian owned company would do a better job than a foreign company in terms of creating jobs, making investments and providing rural service to Canadians.

## Foreign-market entrants

QUESTION - Do you support, somewhat support, somewhat oppose, or oppose foreign-owned wireless telecommunications companies entering the Canadian market to compete for business?

Although Canadians were divided, they were more likely to oppose rather than support the entry of foreign-owned wireless telecommunications companies entering the Canadian market.

## Impact of policy paths

| Responses (\%) | Positive impact | Somewhat positive impact | Neutral impact | Somewhat negative impact | Negative impact | Unsure | Net impact |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Made decisions which favoured neither the Canadian-owned or foreign-owned wireless telecommunications company | 20.5 | 14.1 | 35.8 | 8.0 | 14.3 | 7.2 | 12.3 |
| Made decisions that favoured Canadian-owned wireless telecommunications company | 34.4 | 18.6 | 22.3 | 6.0 | 14.8 | 3.9 | 32.2 |
| Made decisions that favoured foreign-owned wireless telecommunications company | 9.1 | 9.2 | 22.4 | 16.6 | 37.6 | 5.2 | -35.9 |

QUESTION - If the Harper Government made the following decisions for cell phones, smartphones, tablets and wireless Internet data plans, would it have a positive, a somewhat positive, neutral, somewhat negative, or negative impact on your view of the Harper Government? [ROTATE Q20 TO Q22]

Decisions that favoured Canadian-owned wireless companies would have a noticeable net positive impact on the view Canadians would have of the Harper Government while favouring foreign-owned would have a net negative impact.

## No favourites for airwave auction

QUESTION - As you may have heard, the Government of Canada will soon be auctioning access to a new type of airwaves for use by wireless companies. Under the current rules, it would be possible for a large foreign company to bid and win access to twice the amount of airwaves as most Canadian companies. Which would you think is in the best interest of consumers:

By a wide margin Canadians would prefer that the Government of Canada allow both Canadian- and foreign-owned companies to both bid without favouring either.

## Who can purchase a company for sale

QUESTION - Let's assume that a Canadian wireless telecommunications company was for sale. Which of the following types of companies should have an opportunity to purchase a Canadian wireless telecommunications company that was for sale? Would it be...

Only 2.9\% of Canadians thought that ONLY foreign-owned telecommunications companies should be able to buy a Canadian wireless telecommunications company for sale while a majority favoured both having that opportunity.

## Build own network or use existing network

QUESTION - Let's assume that a foreign telecommunications company with four times the revenue of Canada's three largest wireless providers combined wanted to enter the Canadian market to offer wireless services. Which of the following is closer to your own view? Should this large foreign company build its own wireless telecommunications network to serve all Canadians or should Canadian wireless telecommunications companies be required to provide this larger foreign competitor with access to their wireless networks.

A majority of Canadians thought that a large foreign entrant into the telecommunications field should have to build its own wireless network.

Methodology

## Methodology

This study of Canadians was commissioned by Bell and TELUS and was comprised of a random telephone survey of 2,000 Canadians conducted between August $12^{\text {th }}$ and $19^{\text {th }}$, 2013. Participants were randomly recruited by telephone. The sample included both landand cell-lines across Canada. The results were statistically checked and weighted geographically and by age using the latest Census data. Geographic oversamples were created to allow for more robust regional analysis.

The margin of error for a random survey of 2,000 Canadians is $\pm 2.2$ percentage points, 19 times out of 20 .

Random Telephone Survey of 2,000 Canadians conducted between August $12^{\text {th }}$ and $19^{\text {th }}, 2013$. Fixed regional quotas were established with the final dataset weighted by region and age using the latest Census data to be representative of the Canadian population. The margin of error for a survey of 2,000 Canadians is $\pm 2.2$ percentage points, 19 times out of twenty.
