# Weekly Nanos Party Power Index

Liberals score 57 points out of 100, Tories 53 points, NDP  
49 points on Nanos Party Power Index  
*(Released 02/11/2015)*

Every week of the year Nanos tracks the national political pulse and is in the field for the Nanos Party Power Index consistently applying the same tracking questions. The federal Liberals scored four points higher than the Conservatives on the Nanos Party Power Index. The Liberals registered 57 points out of a possible 100, followed by the Conservatives with 53 points, the NDP with 49 points, the Green Party with 31 points and the BQ with 25 points respectively.

The Nanos Party Power Index methodology is comprised of a basket of political goods that includes ballot preferences, accessible voters, preferred PM views and evaluations of the leaders. It is modeled similar to a standard confidence index. It is a random telephone survey conducted with live agents, reaching out to Canadians through a land- and cell-line dual frame sample.

Thirty two per cent of Canadians prefer Harper as Prime Minister while 31 per cent prefer Trudeau, 17 per cent prefer Mulcair, three per cent prefer May and 15 per cent were unsure.

When one gauges the pool of accessible voters for each of the parties through a series of independent questions, 54 per cent would consider voting for the federal Liberals, 45 per cent would consider voting for the NDP, 44 per cent would consider voting for the Conservatives and 29 per cent would consider voting for the Green Party.

# Party Power Index

The Nanos Party Power Index Tracking for Canada is based on a composite of the following public opinion measures: the national ballot, which party individuals would consider voting for, the top two choices for Prime Minister, and whether each party leader has good leadership qualities.

# About the Index

## *Weekly Nanos Party Power Index*

Since voters are not actually able to make a choice between elections, it is interesting to think about party strength and support more broadly. The Nanos Party Power Index fills this need by incorporating more information than just current vote preference.

The Nanos Party Power Index is a weekly composite measurement of federal party brands based on four questions about the federal parties and their leadership. The questions include:

- a ballot question that captures the 1<sup>st</sup> and 2<sup>nd</sup> vote preferences;
- a measure of whether the respondent would consider voting for the party;
- the 1<sup>st</sup> and 2<sup>nd</sup> preferences for Prime Minister of the current federal leaders; and,
- whether the respondent believes each current leader has the quality to be a good leader.

The views of 1,000 respondents are compiled into a diffusion brand index for each party that goes from 0 to 100, where 0 means that the party has no brand strength and 100 means it has maximum brand strength. A score above 50 is an indication of brand strength for the party and its leader at this time.

The important factors in this weekly tracking include the direction of the brand strength or weakness and also the brand strength of one federal party relative to another.

## National – Weekly Tracking (Four week rolling average ending February 6<sup>th</sup>, 2015, n=1,000)

# Methodology

## *Survey Methodology*

The Weekly Nanos Party Power Index Tracking is produced by the Nanos Research Corporation, headquartered in Canada, which operates in Canada and the United States. The data is based on random telephone interviews with 1,000 Canadians (land- and cell-lines), using a four week rolling average of 250 respondents each week, 18 years of age and over. The random sample of 1,000 respondents may be weighted by age and gender using the latest census information for Canada. The interviews are compiled into a four week rolling average of 1,000 interviews, where each week the oldest group of 250 interviews is dropped and a new group of 250 interviews is added. The views of 1,000 respondents are compiled into a diffusion brand index for each party that goes from 0 to 100, where 0 means that the party has no brand strength and 100 means it has maximum brand strength. A score above 50 is an indication of brand strength for the party and its leader at this time.

The current report is based on a four week rolling average of Canadian opinion ending February 6<sup>th</sup>, 2015.

A random telephone survey of 1,000 Canadians is accurate 3.1 percentage points, plus or minus, 19 times out of 20.

## About Nanos

Nanos is one of North America's most trusted research and strategy organizations. Our team of professionals is regularly called upon by senior executives to deliver superior intelligence and market advantage whether it be helping to chart a path forward, managing a reputation or brand risk or understanding the trends that drive success. Services range from traditional telephone surveys, through to elite in-depth interviews, online research and focus groups. Nanos clients range from Fortune 500 companies through to leading advocacy groups interested in understanding and shaping the public landscape. Whether it is understanding your brand or reputation, customer needs and satisfaction, engaging employees or testing new ads or products, Nanos provides insight you can trust.
