### Weekly Nanos Party Power Index Tracking

### Nanos Weekly Tracking, ending February 27, 2015 (released March 4, 2015)

Ideas powered by world-class data

### Weekly Nanos Party Power Index

### Liberals score higher than Conservatives on Nanos Index – Tories and Harper at an 52 week high (Released 03/04/2015)

Although the Liberals still score marginally higher on the Nanos Party Power Index, the Conservatives have reached their highest score since August 2013 and the gap between the Liberals and the Conservatives is the closest since that period at only two points on the 100 point scale. The weekly tracking suggests a seven week positive trajectory for the Tories although they still score lower than the Liberals. The Tory movement has been largely driven by increasingly positive scores in Ontario and Quebec.

The Nanos Party Power Index methodology is comprised of a basket of political goods that includes ballot preferences, accessible voters, preferred PM views and evaluations of the leaders. It is modeled similar to a standard confidence index. It is a random telephone survey conducted with live agents, reaching out to Canadians through a land- and cell-line dual frame sample.

The latest weekly tracking on the Index has the Liberals at 56 points out of a possible 100 points, followed by the Conservatives at 54 points, the NDP at 48 points, the Green Party at 31 points and the BQ at 27 points (QC only).

Harper has hit a new 12 month high on the preferred Prime Minister measure, while Trudeau and Mulcair are near their 12 month average. Asked who they would prefer as PM, Harper was at 34 per cent, followed by Trudeau at 31 per cent, Mulcair at 17 per cent, May at four per cent and 13 per cent were unsure.

Asked a series of independent questions as to whether they would consider or not consider voting for each of the federal parties, 52 per cent of Canadians would consider voting Liberal while 43 per cent would consider voting Conservative, 43 per cent would consider voting NDP and 24 per cent would consider voting for the Greens.

## **About the Index**

### Weekly Nanos Party Power Index

Since voters are not actually able to make a choice between elections, it is interesting to think about party strength and support more broadly. The Nanos Party Power Index fills this need by incorporating more information than just current vote preference.

The Nanos Party Power Index is a weekly composite measurement of federal party brands based on four questions about the federal parties and their leadership. The questions include:

- a ballot question that captures the 1<sup>st</sup> and 2<sup>nd</sup> vote preferences;
- a measure of whether the respondent would consider voting for the party;
- the 1<sup>st</sup> and 2<sup>nd</sup> preferences for Prime Minister of the current federal leaders; and,
- whether the respondent believes each current leader has the quality to be a good leader.

The views of 1,000 respondents are compiled into a diffusion brand index for each party that goes from 0 to 100, where 0 means that the party has no brand strength and 100 means it has maximum brand strength. A score above 50 is an indication of brand strength for the party and its leader at this time.

The important factors in this weekly tracking include the direction of the brand strength or weakness and also the brand strength of one federal party relative to another.

### Methodology

www.nanos.co

### Survey Methodology

The Weekly Nanos Party Power Index Tracking is produced by the Nanos Research Corporation, headquartered in Canada, which operates in Canada and the United States. The data is based on random telephone interviews with 1,000 Canadians (land- and cell-lines), using a four week rolling average of 250 respondents each week, 18 years of age and over. The random sample of 1,000 respondents may be weighted by age and gender using the latest census information for Canada. The interviews are compiled into a four week rolling average of 1,000 interviews, where each week the oldest group of 250 interviews is dropped and a new group of 250 interviews is added. The views of 1,000 respondents are compiled into a diffusion brand index for each party that goes from 0 to 100, where 0 means that the party has no brand strength and 100 means it has maximum brand strength. A score above 50 is an indication of brand strength for the party and its leader at this time.

The current report is based on a four week rolling average of Canadian opinion ending February 27<sup>th</sup>, 2015.

A random telephone survey of 1,000 Canadians is accurate 3.1 percentage points, plus or minus, 19 times out of 20.

### About Nanos

Nanos is one of North America's most trusted research and strategy organizations. Our team of professionals is regularly called upon by senior executives to deliver superior intelligence and market advantage whether it be helping to chart a path forward, managing a reputation or brand risk or understanding the trends that drive success. Services range from traditional telephone surveys, through to elite in-depth interviews, online research and focus groups. Nanos clients range from Fortune 500 companies through to leading advocacy groups interested in understanding and shaping the public landscape. Whether it is understanding your brand or reputation, customer needs and satisfaction, engaging employees or testing new ads or products, Nanos provides insight you can trust.
