## Canadians' Views on Canada's Energy Future

University of Ottawa Positive Energy Summary

Submitted by Nanos to the University of Ottawa, October, 2015
(Submission 2015-691)

## Support for policy actions

Overall Canadians generally believe that it is possible to develop resources while protecting the environment and are supportive of investments in the renewable energy sector. They also clearly expect the federal government to take the lead and think the national interest is more important than local, provincial or Aboriginal views.

- Support for policy actions - The strongest level of support among six ideas is for growth in the renewable energy sector in Canada ( $71 \%$ support and $22 \%$ somewhat support). There is also considerable support for governments negotiating an energy accord with Aboriginal peoples to reduce conflict and uncertainty ( $49 \%$ support and $32 \%$ somewhat support) and to encourage more refining in Canada ( $45 \%$ support and $32 \%$ somewhat support). A majority of Canadians also supported having new taxes on fossil fuels ( $28 \%$ support and $27 \%$ somewhat support) and for growth in the oil and gas sector in Canada ( $28 \%$ support and $31 \%$ somewhat support).
- Developing resources while protecting the environment-Most Canadians think is is either possible (55\%) or somewhat possible (36\%) to develop energy resources while protecting the environment.
- Willingness to be more supportive of fossil fuel development - When it comes to the development of fossil fuel energy resources, $35 \%$ think is is possible and $42 \%$ somewhat possible that they would be more supportive if Canada had a more proactive climate change policy.
- Protecting the environment vs. creating jobs - More Canadians think the priority should be on protecting the environment (57\%) than growth and job creation (29\%). Since March of this year, more people have become uncertain (from 9\% to 14\%) or in favour of jobs (from $24 \%$ to 29\%).
- Transition to cleaner energy - A majority of Canadians (54\%) think we should have a long term transition away from fossil fuels to cleaner fuels rather than an aggressive transition (39\%).
- Federal vs. provincial leadership - There is a clear preference (68\%) for the federal government to take the lead on major pipeline projects over the provincial governments (24\%). The desire for federal leadership (78\%) is even more pronounced for reducing greenhouse gas emissions.
- Relative importance of national vs. other interests - When considering whether a proposed energy project should move forward, a majority of Canadians think the national interest should take precedence over the interests of local residents, Aboriginal peoples and people in their province.
- A majority (57\%) and higher than in March of this year (51\%), think that national interest should be more important than the views of local residents.
- $54 \%$ (up from $49 \%$ in March) think the national interest is more important than the interest of the views of First Nations, Métis and Inuit peoples (36\%).
- $58 \%$ (up from 49\% in March) think the national interest is more important than the interests of the views of people in your province.
- Performance on benefits-costs of energy projects and climate change - Canadians are generally negative when it comes to how well Canada does at ensuring the benefits of energy projects are distributed equitably across Canada ( $24 \%$ very poor and $27 \%$ poor). They are even more negative when it comes to having environmental policies on climate change that align with the views of Canadians (35\% very poor and $26 \%$ poor).
- Credibility on environmental policies and climate change - Only 3\% think Canada has a high level of credibility and $10 \%$ a somewhat high level of credibility on the international stage when it comes to environmental policies on climate change (net $13 \%$ high credibility). Against this, $46 \%$ think Canada has a low and $18 \%$ somewhat low level of credibility (net 64\%).

These observations are based on an RDD dual frame (land- and cell-lines) hybrid telephone and online random survey of 1,000 Canadians, 18 years of age or older, between October $15^{\text {th }}$ and $16^{\text {th }}, 2015$ as part of an omnibus survey. The research was commissioned by University of Ottawa Positive Energy. The margin of error for a random survey of 1,000 Canadians is $\pm 3.1$ percentage points, 19 times out of 20.

Methodology

## Methodology

Nanos conducted an RDD dual frame (land- and cell-lines) hybrid telephone and online random survey of 1,000 Canadians, 18 years of age or older, between October $15^{\text {th }}$ and $16^{\text {th }}, 2015$ as part of an omnibus survey. Participants were randomly recruited by telephone using live agents and administered a survey online. The sample included both land- and cell-lines across Canada. The results were statistically checked and weighted by age and gender using the latest Census information and the sample is geographically stratified to be representative of Canada.

Individuals randomly called using random digit dialling with a maximum of five call backs.

The margin of error for a random survey of 1,000 Canadians is $\pm 3.1$ percentage points, 19 times out of 20.

The research was commissioned by University of Ottawa Positive Energy.

Note: Charts may not add up to 100 due to rounding.

## About Nanos

Nanos is one of North America's most trusted research and strategy organizations. Our team of professionals is regularly called upon by senior executives to deliver superior intelligence and market advantage whether it be helping to chart a path forward, managing a reputation or brand risk or understanding the trends that drive success. Services range from traditional telephone surveys, through to elite in-depth interviews, online research and focus groups. Nanos clients range from Fortune 500 companies through to leading advocacy groups interested in understanding and shaping the public landscape. Whether it is understanding your brand or reputation, customer needs and satisfaction, engaging employees or testing new ads or products, Nanos provides insight you can trust.

## Technical Note - H

| Element | Description |
| :---: | :---: |
| Organization who commissioned the research | University of Ottawa Positive Energy |
| Final Sample Size | 1000 Randomly selected individuals. |
| Margin of Error | $\pm 3.1$ percentage points, 19 times out of 20. |
| Mode of Survey | RDD dual frame (land- and cell-lines) hybrid telephone and online [omnibus] survey |
| Sampling Method Base | The sample included both land- and cell-lines RDD (Random Digit Dialed) across Canada. |
| Demographics (Captured) | Atlantic Canada, Quebec, Ontario, Prairies, British Columbia; Men and Women; 18 years and older. <br> Six digit postal code was used to validate geography. |
| Demographics (Other) | Age, gender, education, income |
| Fieldwork/Validation | Live interviews with live supervision to validate work as per the MRIA Code of Conduct |
| Number of Calls | Maximum of five call backs. |
| Time of Calls | Individuals were called between 12-5:30 pm and 6:309:30pm local time for the respondent. |
| Field Dates | October $15^{\text {th }}$ to $16^{\text {th }}, 2015$. |
| Language of Survey | The survey was conducted in both English and French. |

| Element | Description |
| :--- | :--- |
| Weighting of Data | The results were weighted by age and gender using the latest <br> Census information (2014) and the sample is geographically <br> stratified to ensure a distribution across all regions of Canada. <br> See tables for full weighting disclosure |
| Screening | Screening ensured potential respondents did not work in the <br> market research industry, in the advertising industry, in the <br> media or a political party prior to administering the survey to <br> ensure the integrity of the data. |
| Excluded <br> Demographics | Individuals younger than 18 years old; individuals without land or <br> cell lines could not participate. |
| Stratification | By age and gender using the latest Census information (2014) and <br> the sample is geographically stratified to be representative of <br> Canada. Smaller areas such as Atlantic Canada were marginally <br> oversampled to allow for a minimum regional sample. |
| Estimated <br> Response Rate | 15\% percent, consistent with industry norms. |
| Question Order | Question order in the preceding report reflects the order in <br> which they appeared in the original questionnaire. |
| Question Content | This was module five of an omnibus survey. The preceding <br> modules included questions on unprompted issues of national <br> concern and vote preferences, as well as questions regarding the <br> economic impact of the election. |
| Question Wording | The questions in the preceding report are written exactly as they <br> were asked to individuals. |
