

Canadians' impressions and use of pharmacy services

Neighbourhood Pharmacies Survey Summary

submitted by Nanos to Neighbourhood Pharmacies, June 2016
(Submission 2016-775)

Canadians' positive impressions of pharmacies on the rise; want a pharmacist who knows them and cares about their health

Canadians' impressions of pharmacies have grown more positive since the previous wave of research in November of 2015, with the most mentioned reason being that pharmacies are professional/provide a crucial service and that they are knowledgeable/helpful. The slight majority of Canadians say pharmacy staff initiates a conversation with them about their prescription or health every time they pick up a prescription or most of the time, and feel that having a pharmacist who knows them and cares about their health is the most important factor when selecting a pharmacy.

- **Impressions of pharmacies are generally positive** – Three in four Canadians have either a positive (43%) or somewhat positive (33%) impression in general of pharmacies, while 6% have a somewhat negative impression and three percent have a negative impression. Sixteen percent have a neutral impression and less than one percent are unsure. This is an increase in positivity from the previous wave in November of 2015 (36% positive; 29% somewhat positive), and the highest positive/somewhat positive score since April of 2014 (40% positive; 36% somewhat positive).
- **Reason for their impressions** – The most frequently mentioned reason for their impressions of pharmacies was that they are professional/do their job/provide a crucial service (22%), followed by them being knowledgeable/helpful (20%), and that they don't have enough experience with pharmacies to comment/no issues with them (13%). Also mentioned was that they don't mind pharmacies but have a negative view of the pharmaceutical industry/drugs (nine percent), them being profit driven/having high prices (nine percent), and that there are good and bad pharmacies/prefer small independent ones to chains (six percent). Two percent said pharmacists can take on the role of physicians/help with medical care, and 19% were unsure/did not answer the question.

- **Canadians report taking an average of 1.9 prescription drugs a day, a median of 1.0 a day** – The average number of prescription drugs Canadians take in a day is 1.9, while the median is 1.0. This is lower in those aged 18 to 29 (0.81 on average, median of zero) and highest in those aged 60 plus (2.79 on average, median of 2.0). Those who have a positive impression of pharmacies also take a slightly higher average of prescription drugs each day (2.23), compared to those with a negative impression (1.03 on average).
- **Six in ten Canadians find pharmacy staff initiate conversations about health or medications every time or most of the time** – Six in ten Canadians say when picking up their prescription the pharmacy staff initiate a conversation with them about their medications or health every time (27%) or most of the time (32%). Twenty-nine percent say this happens occasionally, while seven percent say it never happens and six percent are unsure. Those with a positive impression of pharmacies were much more likely to say this happens every time or most of the time (72%) than those with a negative impression of pharmacies (34%).
- **Canadians feel having a pharmacist who knows and cares for their health is important to them** – Asked which is the most important to them when choosing a pharmacy, 39% of Canadians say that having a pharmacist who knows them and is concerned about their health is the most important, followed by being able to pick up their prescription quickly and easily (33%). Eighteen percent say that getting the lowest possible cost for their medications is the most important to them, while six percent say it is the expectation that the full quantity of prescription will be in stock. Five percent are unsure. Those with a positive impression of pharmacies were more likely to say that having a pharmacist who knows and cares for them is the most important (52%) than those with a negative impression (21%).

Nanos conducted an RDD dual frame (land- and cell-lines) hybrid telephone and online random survey of 1,000 Canadians, 18 years of age or older, between May 27th and June 1st, 2016 as part of an omnibus survey. Participants were randomly recruited by telephone using live agents and administered a survey online. The sample included both land- and cell-lines across Canada. Individuals were randomly called using random digit dialling with a maximum of five call backs. The margin of error for a random survey of 1,000 Canadians is ± 3.1 percentage points, 19 times out of 20.

This study was commissioned by Neighbourhood Pharmacies.

General impression of pharmacies

QUESTION - Which of the following is most important to you when choosing a pharmacy? [RANDOMIZE]

Methodology

Methodology

Nanos conducted an RDD dual frame (land- and cell-lines) hybrid telephone and online random survey of 1,000 Canadians, 18 years of age or older, between May 27th and June 1st, 2016 as part of an omnibus survey. Participants were randomly recruited by telephone using live agents and administered a survey online. The sample included both land- and cell-lines across Canada. The results were statistically checked and weighted by age and gender using the latest Census information and the sample is geographically stratified to be representative of Canada.

Individuals were randomly called using random digit dialling with a maximum of five call backs.

The margin of error for a random survey of 1,000 Canadians is ± 3.1 percentage points, 19 times out of 20.

The research was commissioned by Neighbourhood Pharmacies.

Note: Charts may not add up to 100 due to rounding.

About Nanos

Nanos is one of North America's most trusted research and strategy organizations. Our team of professionals is regularly called upon by senior executives to deliver superior intelligence and market advantage whether it be helping to chart a path forward, managing a reputation or brand risk or understanding the trends that drive success. Services range from traditional telephone surveys, through to elite in-depth interviews, online research and focus groups. Nanos clients range from Fortune 500 companies through to leading advocacy groups interested in understanding and shaping the public landscape. Whether it is understanding your brand or reputation, customer needs and satisfaction, engaging employees or testing new ads or products, Nanos provides insight you can trust.

Technical Note

Element	Description
Organization who commissioned the research	Neighbourhood Pharmacies
Final Sample Size	1000 Randomly selected individuals.
Margin of Error	±3.1 percentage points, 19 times out of 20.
Mode of Survey	RDD dual frame (land- and cell-lines) hybrid telephone and online [omnibus] survey
Sampling Method Base	The sample included both land- and cell-lines RDD (Random Digit Dialed) across Canada.
Demographics (Captured)	Atlantic Canada, Quebec, Ontario, Prairies, British Columbia; Men and Women; 18 years and older. Six digit postal code was used to validate geography.
Fieldwork/Validation	Live interviews with live supervision to validate work as per the MRIA Code of Conduct
Number of Calls	Maximum of five call backs.
Time of Calls	Individuals were called between 12-5:30 pm and 6:30-9:30pm local time for the respondent.
Field Dates	May 27 th to June 1 st , 2016.
Language of Survey	The survey was conducted in both English and French.

Element	Description
Weighting of Data	The results were weighted by age and gender using the latest Census information (2014) and the sample is geographically stratified to ensure a distribution across all regions of Canada. See tables for full weighting disclosure
Screening	Screening ensured potential respondents did not work in the market research industry, in the advertising industry, in the media or a political party prior to administering the survey to ensure the integrity of the data.
Excluded Demographics	Individuals younger than 18 years old; individuals without land or cell lines could not participate.
Stratification	By age and gender using the latest Census information (2014) and the sample is geographically stratified to be representative of Canada. Smaller areas such as Atlantic Canada were marginally oversampled to allow for a minimum regional sample.
Estimated Response Rate	Sixteen percent, consistent with industry norms.
Question Order	Question order in the preceding report reflects the order in which they appeared in the original questionnaire.
Question Content	This was module seven of an omnibus survey. Previous modules included vote preferences, unprompted issues of concern, electorate reform, marijuana legalization, gasoline and greenhouse gas emissions, and nurses in Canada.
Question Wording	The questions in the preceding report are written exactly as they were asked to individuals.
Survey Company	Nanos Research
Contact	Contact Nanos Research for more information or with any concerns or questions. http://www.nanosresearch.com Telephone:(613) 234-4666 ext. Email: info@nanosresearch.com.
