The Weekly Nanos Tracking is produced by the Nanos Research Corporation, headquartered in Canada, which operates in Canada and the United States. The data is based on random interviews with 1,117 Canadian consumers (recruited by RDD land- and cell-line sample), using a four-week rolling average of 250 respondents each week, 18 years of age and over. The random sample of 1,117 respondents may be weighted using the latest census information for Canada. The interviews are compiled into a four-week rolling average of 1,117 interviews where each week, the oldest group of 250 interviews is dropped and a new group of 250 interviews is added.

A random survey of 1,117 respondents in Canada is accurate 2.9 percentage points, plus or minus, 19 times out of 20. This report is based on the four waves of tracking ending August 30, 2024.

Since voters are not actually able to make a choice between elections, it is interesting to think about party strength and support more broadly. The Nanos Party Power Index fills this need by incorporating more information than just current vote preference.

The Nanos Party Power Index is a weekly composite measurement of federal party brands based on four questions about the federal parties and their leadership. The questions include:

- a ballot question that captures the 1st and 2nd vote preferences;
- a measure of whether the respondent would consider voting for the party;
- the 1st and 2nd preferences for Prime Minister of the current federal leaders; and,
- whether the respondent believes each current leader has the quality to be a good leader.

The views of 1,117 respondents are compiled into a diffusion brand index for each party that goes from 0 to 100, where 0 means that the party has no brand strength and 100 means it has maximum brand strength. A score above 50 is an indication of brand strength for the party and its leader at this time. The important factors in this weekly tracking include the direction of the brand strength or weakness and also the brand strength of one federal party relative to another.

Le suivi hebdomadaire de Nanos est produit par Nanos Research Corporation. Les données sont fondées sur des entrevues aléatoires avec 1 117 consommateurs canadiens (recrutés au téléphone à l'aide de l'échantillonnage à deux trames (terrestre et cellulaire) avec des agents en direct, utilisant une moyenne mobile de quatre semaines avec 250 répondants chaque semaine, âgés de 18 ans et plus. L'échantillon aléatoire de 1 117 répondants peut être pondéré selon l'âge et le sexe en utilisant les dernières données du recensement pour le Canada. Les entrevues sont compilées en une moyenne mobile de 1 117 entrevues sur quatre semaines, où chaque semaine, le groupe de 250 Canadiens le plus anciennement interrogé est abandonné et un nouveau groupe de 250 entrevues est ajouté.

Un sondage aléatoire auprès de 1 117 Canadiens est exact à $\pm 2,9$ points de pourcentage, 19 fois sur 20. Les données présentées dans ce rapport sont basées sur la période de suivi se terminant le 30 août 2024.

Comme les électeurs ne sont pas en mesure de faire un choix entre les élections il est intéressant de penser à la force du parti et à son soutien à un niveau plus large. Le suivi fédéral de Nanos répond à ce besoin en incorporant plus d'informations sur les préférences politiques, au-delà de la préférence actuelle de vote.

Le suivi fédéral de Nanos est une mesure composite hebdomadaire des marques des partis fédéraux fondée sur quatre questions concernant les partis fédéraux et leur leadership. Les questions comprennent:

- une question de scrutin qui capture les préférences de premier et de second vote;
- une mesure permettant de savoir si le répondant envisagerait de voter pour un parti donné;
- la 1ère et 2ème préférence pour Premier ministre parmi les dirigeants fédéraux actuels; et,
- si le répondant croit que chaque leader actuel possède les qualités d'un bon leader.

Les opinions de 1 117 répondants sont compilées dans un indice de marque de diffusion pour chaque parti qui va de 0 à 100, où 0 signifie que le parti n'a pas de force de marque et 100 signifie qu'il a la force de marque maximale. Un score supérieur à 50 est une indication de force de marque pour ce parti et son leadership en ce moment. Les facteurs importants dans ce suivi hebdomadaire incluent la direction de la force ou de la faiblesse de marque ainsi que la force de marque d'un parti fédéral par rapport à un autre.

Margin of Error for Research

Factoring the margin of error for the national random sample administered by Nanos, Liberal support may be as high as 36.0% or as low as 28.8%. Likewise, support for the Conservatives may be as high as 34.8% or as low as 27.6%.

Key Takeaways

All of the Nanos estimates were within the reported margin of error for the election call.

Both the Sat/Sun sample and the Sunday only election call samples showed a tight race which manifested itself in the final result.

The total error for the six parties plus others is 7.8 for an average error of about 1.1 percent.
