Party Heat Maps of Support

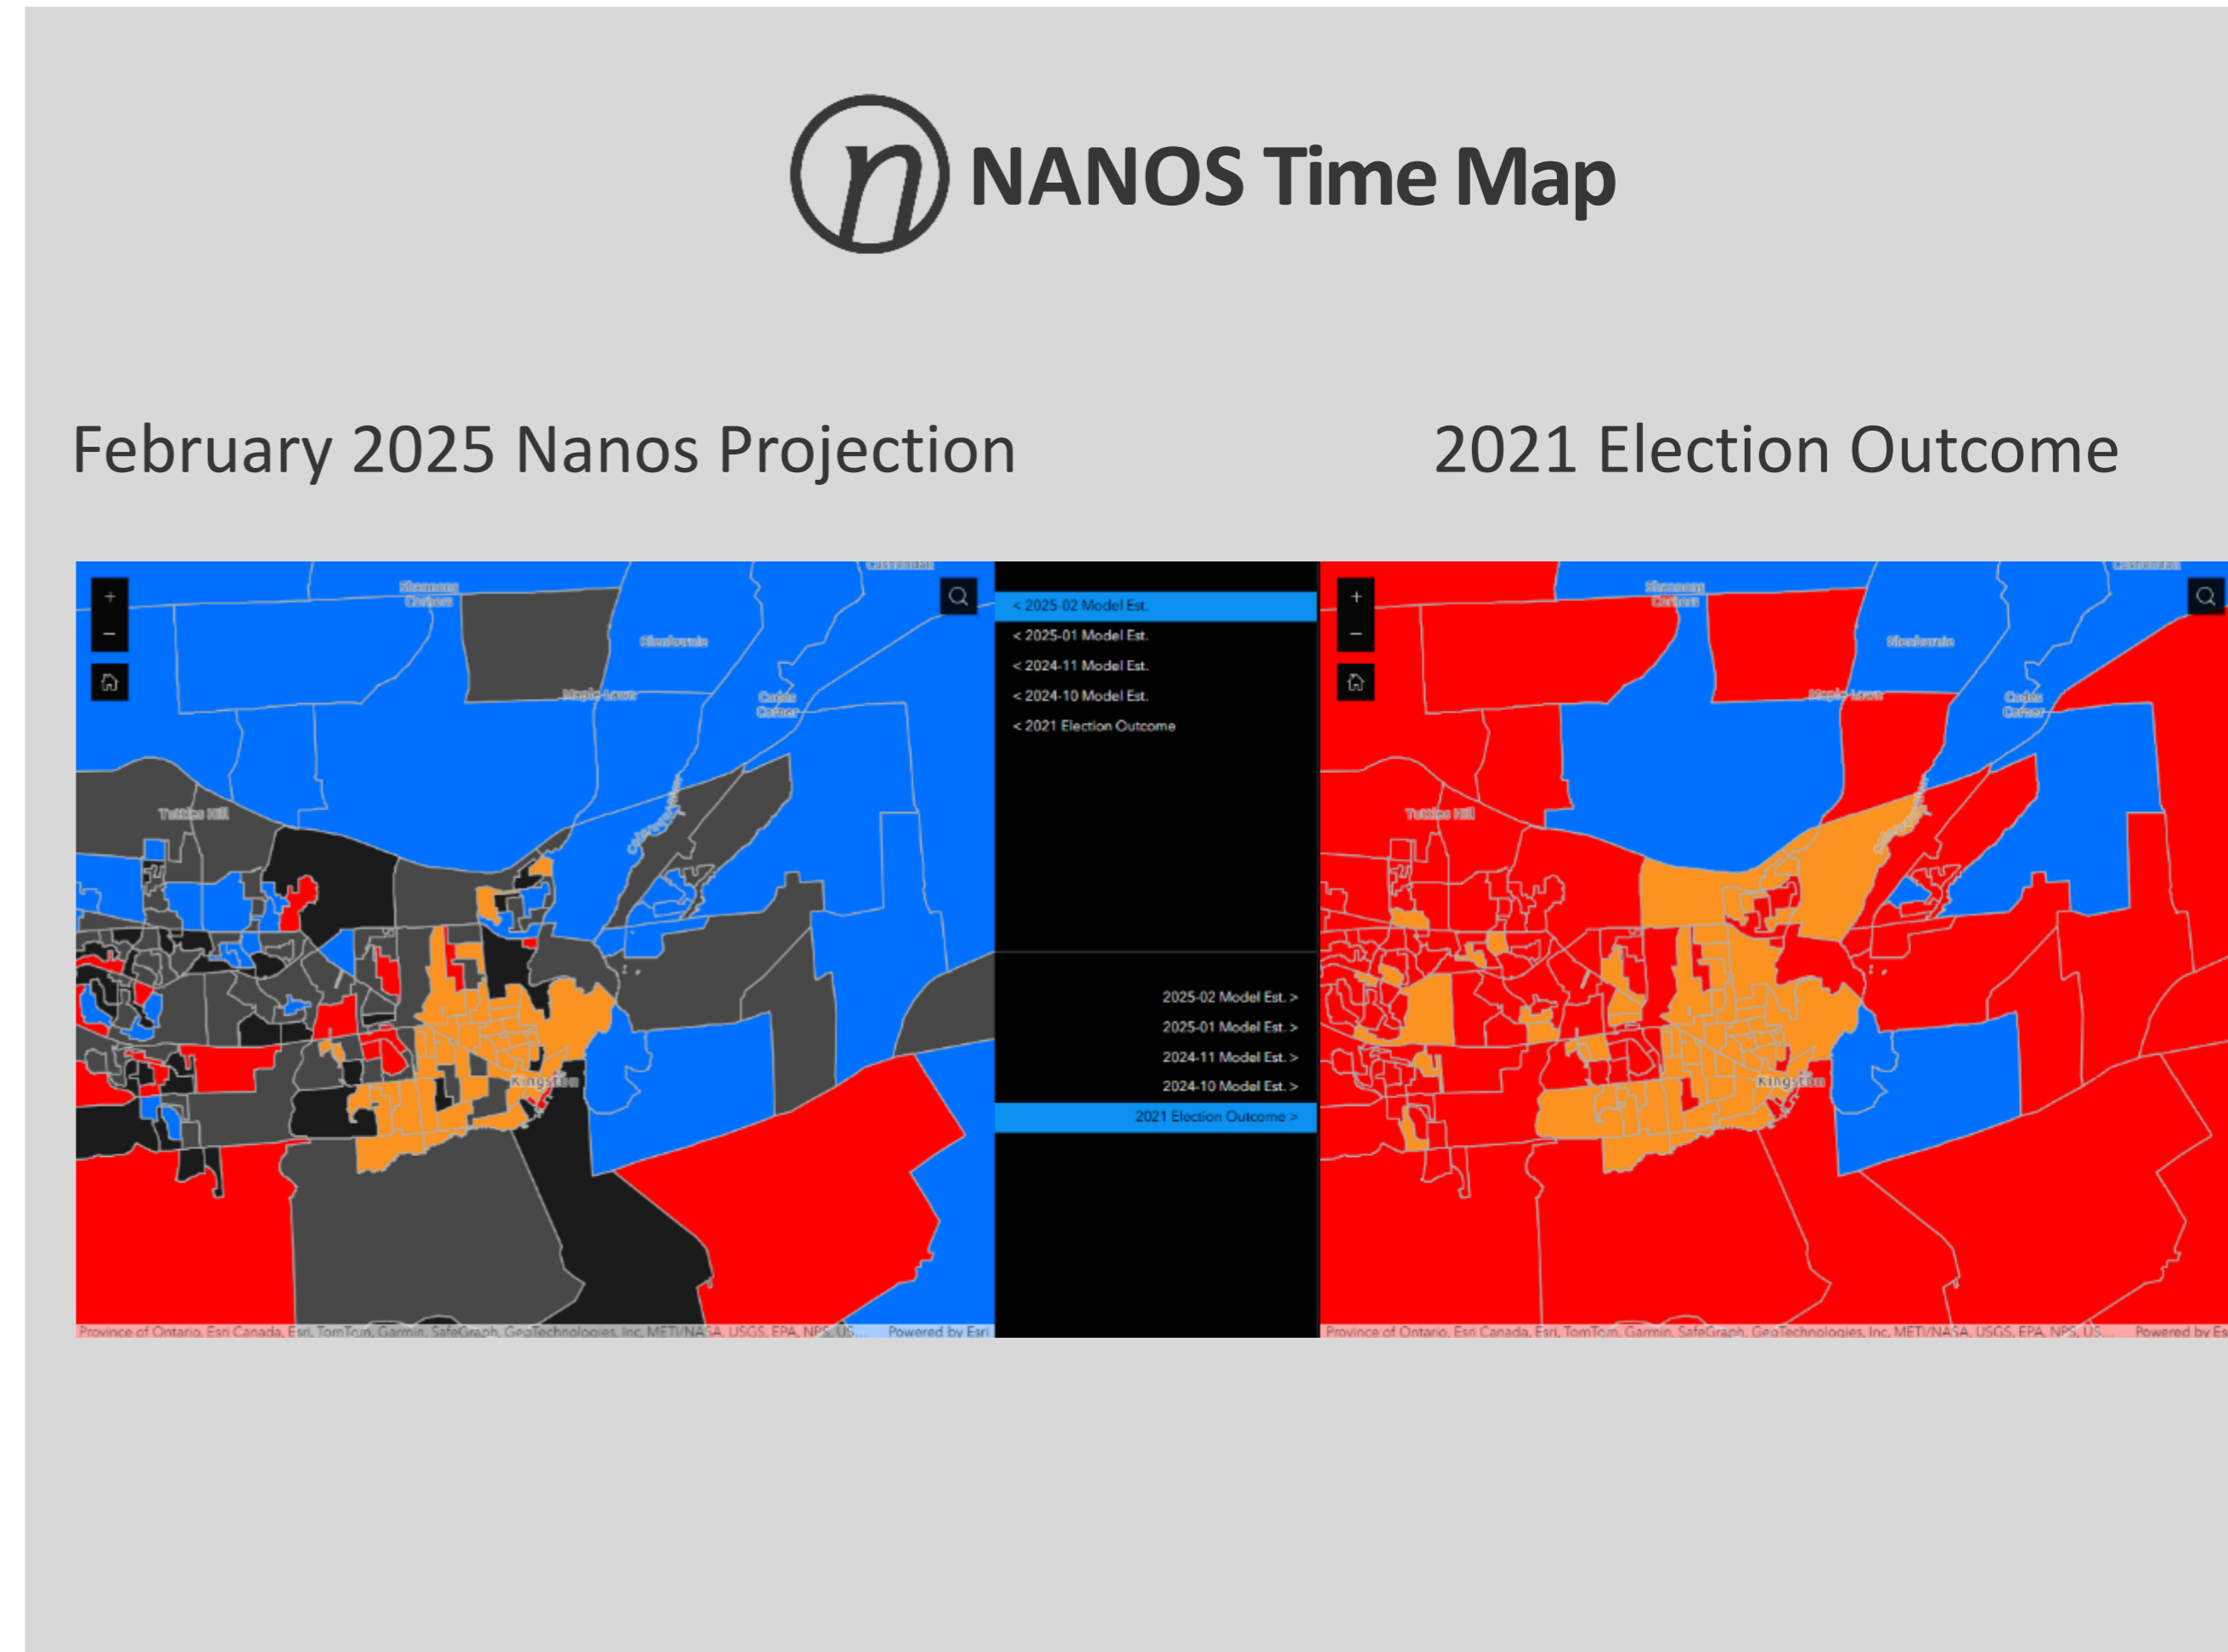

Model Estimate Map Series Trends

As a non-partisan research organization with a distinguished level of data reliability, our services are open to subscribers. Subscription package options are based on scope of geography and breadth of data. Access to data is open to any subscriber on a non-partisan basis.

# Access Weekly Neighbourhood Projections

Access newly-updated WEEKLY data throughout the campaign for each of the following:

- ✓ View riding projections on a neighbourhood basis, updated with new boundaries, including a projected winner or whether it is too close to call
- ✓ Click on a neighbourhood and instantly view projected support for each party with margins of victory
- ✓ Get heat maps of current projected support for all parties
- ✓ Battleground neighbourhoods that are in play in existing or new areas of your riding
- ✓ Side-by-side viewer to compare current projections against previous election results and model projections

Can your riding really afford to miss out on neighbourhood map data from Nanos to target voters?  
Subscribe today and get the data you can trust.

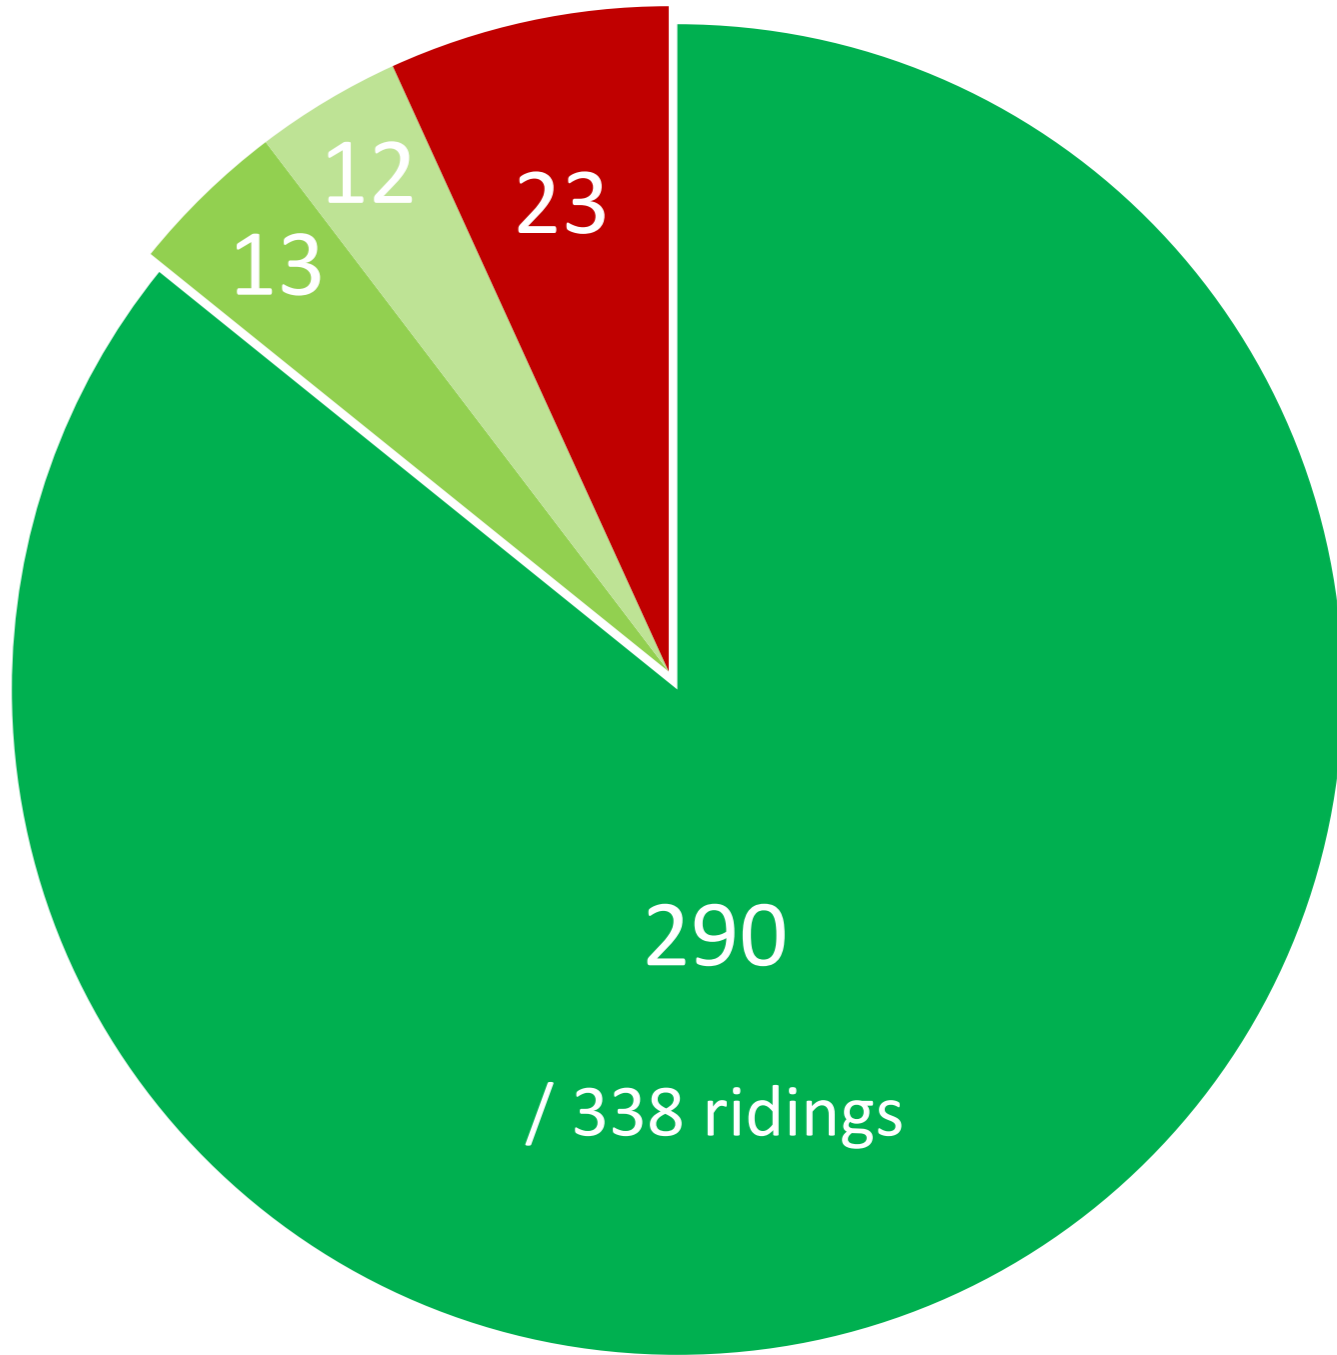

# Nanos vs Election 2021

Nanos has a proven track record of success putting strategic intelligence into the hands of decision makers. Nanos Research is the pollster of record for CTV News and the Globe and Mail.

The Nanos Time Map Model accurately predicted the outcome in 290 out of 338 federal riding outcomes in the 2021 Federal Election.

Counting ridings which were projected as too close to call (within 2% [A] and between 2-7% [B]) as correct, the accuracy of the Nanos model increases.

- Number of ridings outside A and B (margin of victory above 8%) accurately predicted
- Number of A ridings accurately predicted as too close to call (margin of victory within 2%)
- Number of B ridings accurately predicted as too close to call (margin of victory within 2-7%)
- Not predicted accurately
