

Importance of oil and gas to Canada's current and future economy hits new high; majority of Canadians don't want to align with the US on energy or climate policies.

The research gauged the opinions among Canadians on oil and gas, more particularly how important they are to Canada's current and future economy as well as expanding oil and gas exports for a more secure global energy supply and to help combat climate change worldwide. Questions were also asked on the level of government respondents trust most for creating a positive environment for investors building energy infrastructure, government performance in decision-making on energy and climate change and whether Canada should align its energy or climate policies with those of the United States.

Nanos conducted an RDD dual frame (land- and cell-lines) hybrid telephone and online random survey of 1077 Canadians, 18 years of age or older, between January 31st to February 3rd, 2025 as part of an omnibus survey.

The margin of error for a random survey of 1077 Canadians is ± 3.0 percentage points, 19 times out of 20.

The statistical tabulations including the unweighted and weighted number of interviews can be accessed [here](#).

The research was commissioned by the University of Ottawa's Positive Energy program and was conducted by Nanos Research.

KEY FINDINGS

1

OIL AND GAS INCREASINGLY SEEN AS HIGHLY IMPORTANT TO CANADA'S CURRENT AND FUTURE ECONOMY

Close to nine in ten Canadians rate oil and gas as important to Canada's current economy (score of 7-10 out of 10) ([88%](#)) which is a significant increase from the previous wave in August 2024 ([79%](#)), and an all-time high since tracking began in 2020. Additionally, an increasing proportion see oil and gas as important to the future economy, with seven in ten ([70%](#)) giving this a score of 7-10, up [11 percentage points](#) since August 2024 and a [29-point increase](#) from the benchmark wave in 2020.

2

CANADIANS SAY OIL AND GAS CONTINUE TO CONTRIBUTE TO ECONOMY

In terms of why they feel oil and gas are important to Canada's current economy, Canadians most often mention they contribute to and are tied to the Canadian and provincial economies ([42%](#)). The most cited reason for viewing oil and gas as important to Canada's future economy is that they remain a large part and contributor to Canada's economy ([30%](#)) and that switching to clean energy is far from ready to replace fossil fuels and there is still a demand ([22%](#)).

3

CANADIANS AGREE CANADA SHOULD EXPAND OIL AND GAS EXPORTS TO INCREASE GLOBAL ENERGY SECURITY

More than six in ten Canadians agree ([36%](#)) or somewhat agree ([26%](#)) that Canada should expand oil and gas exports to help the world have more secure energy supplies (a 10-percentage point increase from January 2024 – [31% agree; 21% somewhat agree](#)). Of note, men are more likely than women to agree/somewhat agree ([70% of men; 56% of women](#)) that Canada should expand oil and gas exports to help the world have more secure energy supplies.

4

CANADA'S OIL & GAS EXPORTS SEEN AS A POSSIBLE CONTRIBUTOR TO COMBATTING CLIMATE CHANGE BY MAJORITY OF CANADIANS

A majority of Canadians agree ([35%](#)) or somewhat agree ([31%](#)) that exports from Canada's oil and gas sector can contribute to combatting global climate change by displacing energy sources that are more damaging to the climate. This is consistent with previous waves of research. Of note, residents of the Prairies are more likely ([79%](#)) than those from Quebec ([51%](#)) to agree or somewhat agree with this, while men are more likely to agree or somewhat agree ([72%](#)) than women ([60%](#)).

5

CANADIANS MORE LIKELY TO THINK THE GOVERNMENT DOES A POOR JOB AT PROVIDING POLICY/REGULATORY ENVIRONMENT FOR ENERGY INVESTMENTS RATHER THAN A GOOD JOB

Consistent with the previous waves, Canadians are three times more likely to rate the job done by governments at providing a clear, predictable and competitive policy and regulatory environment for investors building energy infrastructure to help Canada meet its climate change targets as very poor ([23%](#)) or poor ([20%](#)) rather than very good ([3%](#)) or good ([10%](#)).

6

REASON FOR POOR OR VERY POOR JOB CITED AS GOVERNMENT MOVING SLOWLY AND CREATING RED TAPE

Those who say governments do a poor or very poor job most often mention that governments in Canada are slow and create red tape ([22%](#)), while those who believe they are doing a good or very good job most often say they are taking actions and moving in the right direction ([24%](#)).

KEY FINDINGS, CONT'D

7

CANADIANS DIVIDED OVER WHETHER THEY TRUST THE FEDERAL OR THEIR PROVINCIAL GOVERNMENT MORE TO CREATE A POSITIVE ENVIRONMENT FOR ENERGY INVESTMENTS IN INFRASTRUCTURE

About four in ten Canadians each say they trust the federal government ([41%](#)) or their provincial government ([38%](#)) more in terms of creating a positive environment for investors building energy infrastructure to help Canada meet its climate change targets, while one in five are unsure ([21%](#)).

8

CANADIANS MORE LIKELY TO SAY FEDERAL AND PROVINCIAL GOVERNMENTS DO A POOR JOB RATHER THAN A GOOD JOB AT COOPERATING

Consistent with previous waves, Canadians are six times more likely to say that federal and provincial governments do a very poor/poor job of cooperating on decision-making on energy ([21% very poor; 32% poor](#)) rather than a very good/good job ([1% very good; 8% good](#)). Findings are similar regarding cooperating on decision-making on climate change with just over half who say governments do a very poor ([24%](#)) or poor job ([29%](#)), compared to very good ([1%](#)) or good ([8%](#)).

9

THREE IN FIVE CANADIANS BELIEVE CANADA SHOULD NOT ALIGN ITS CLIMATE OR ENERGY POLICIES WITH THOSE OF THE UNITED STATES

Close to two thirds of Canadians say Canada should somewhat not ([11%](#)) or not align ([53%](#)) its climate policies with those of the United States, while just over six in ten say the same about its energy policies ([14% not align; 47% somewhat not align](#)). Residents of the Prairies ([36%](#)) and Ontario ([30%](#)) are more likely to want Canada to align or somewhat align with the United States on climate policies than residents of Quebec ([15%](#)); the results are similar for energy policies ([Prairies: 38%; Ontario: 32%; Quebec: 17%](#)). Politically right-leaning Canadians are more likely to favour alignment on energy ([60%](#)) or climate policies ([59%](#)) than left-leaning Canadians ([9% energy; 9% climate](#)).

10

CANADIANS WHO WANT ALIGNMENT CITE NEED TO BE ALLIES; THOSE WHO DO NOT MENTION CURRENT ADMINISTRATION AND LACK OF TRUST

Canadians who want Canada's energy policies to have at least some alignment with the US most often say this is because it is easier to partner with the US and we need help ([22%](#)), as well as being helpful to improve the economy ([17%](#)). Those who don't want alignment mention that the current US administration's only focus is drilling and profit and they disregard climate change ([29%](#)), that Trump and the US cannot be trusted ([18%](#)) and that Canada needs to remain independent ([17%](#)). Similarly, when asked why Canada should align on climate policies, the most frequently mentioned reason was that we should be allies and are partners in other things ([21%](#)) and that we should have a 'North America' approach and are the same continent ([16%](#)). Canadians who want little to no alignment say it's because of Trump and the new administration ([36%](#)) and that the US doesn't believe in climate change and don't have climate change policies ([28%](#)).

Current and future of oil and gas

Importance of oil and gas to Canada's current economy

Canadians increasingly (88%) say oil and gas are important to Canada's current economy, a nine-percentage point increase from August 2024 and an all-time high in importance since tracking began in 2020. Politically right-leaning Canadians are more likely to say they are important (mean of 9.6) to Canada's current economy than left-leaning Canadians (mean of 7.8).

Oil and gas exports for security and climate

Level of agreement that Canada should expand oil and gas exports to help the world have more secure energy supplies

Three in five Canadians agree or somewhat agree that Canada should expand oil and gas exports to help the world have more secure energy supplies, which is a 10-percentage point increase compared to the previous wave in January 2024 (52% agree or somewhat agree). Agreement is much higher among those who identify as right-leaning politically (87%) than left-leaning (31%).

Level of agreement that Canada's oil and gas exports can contribute to combatting global climate change if they displace other energy sources that are more damaging to the climate

Canadians are almost 3 times as likely

to agree or somewhat agree (35% agree; 31% somewhat agree) that Canada's oil and gas sector can contribute to combatting global climate change compared with disagree or somewhat disagree (14% disagree; 10% somewhat disagree). The proportion of those who outright agree is consistent with the previous waves of research. Right-leaning Canadians are significantly more likely to agree or somewhat agree with this (82%) than left-leaning Canadians (44%).

Federal-provincial collaboration on energy
and climate

Job done by federal and provincial governments cooperating on decision-making on energy

Consistent with the previous waves, Canadians are six times more likely to think the federal and provincial governments do a very poor (21%) or poor (32%) job of cooperating on decision making on energy rather than a very good (1%) or good one (8%).

Residents of the Prairies are more likely to rate the job done as very poor/poor (78%) than residents of Ontario (54%), BC (51%) or Quebec (36%). Politically right-leaning Canadians are more likely to rate the job done as poor or very poor (66%) than left-leaning Canadians (44%).

*Weighted to the true population proportion.

*Charts may not add up to 100 due to rounding.

Q – Do you think federal and provincial governments together are doing a very good, good, average, poor, or very poor job cooperating on:
Decision-making on energy

Job done by federal and provincial governments cooperating on decision-making on climate change

A majority of Canadians

say the job done by federal and provincial governments cooperating on decision-making on climate change is very poor (24%) or poor (29%) which is a slight decrease from the previous wave in January 2024 (23% very poor; 35% poor).

Of note, residents of the Prairies are again more likely to rate the job done as very poor/poor (75%) than residents of Ontario (56%), BC (53%) or Quebec (37% very poor/poor).

Q –In politics people sometimes talk of left and right. In terms of your political views, where would you place yourself on a scale where 0 means left and 10 means right?

Source: Nanos Research, RDD dual frame hybrid telephone and online random survey, January 31st to February 3rd, 2025, n=1077, accurate 3.0 percentage points plus or minus, 19 times out of 20.

Nanos conducted an RDD dual frame (land- and cell-lines) hybrid telephone and online random survey of 1077 Canadians, 18 years of age or older, between January 31st and February 3rd, 2025 as part of an omnibus survey. Participants were randomly recruited by telephone using live agents and administered a survey online. The results were statistically checked and weighted by age and gender using the latest Census information and the sample is geographically stratified to be representative of Canada.

Individuals were randomly called using random digit dialing with a maximum of five call backs.

The margin of error for a random survey of 1077 Canadians is ± 3.0 percentage points, 19 times out of 20.

The research was commissioned by Positive Energy at the University of Ottawa and was conducted by Nanos Research.

Full data tables with weighted and unweighted number of interviews is [here](#)

Note: Charts may not add up to 100 due to rounding.

Element	Description
Research sponsor	Positive Energy at the University of Ottawa
Population and Final Sample Size	1077 Randomly selected individuals.
Source of Sample	Nanos Probability Panel
Type of Sample	Probability
Margin of Error	±3.0 percentage points, 19 times out of 20.
Mode of Survey	RDD dual frame (land- and cell-lines) hybrid telephone and online omnibus survey
Sampling Method Base	The sample included both land- and cell-lines RDD (Random Digit Dialed) across Canada.
Demographics (Captured)	Atlantic Canada, Quebec, Ontario, Prairies, British Columbia; Men and Women; 18 years and older. Six digit postal code was used to validate geography.
Fieldwork/Validation	Live CATI interviews with live supervision to validate work.
Number of Calls	Maximum of five call backs.
Time of Calls	Individuals were called between 6:30-9:30pm local time for the respondent.
Field Dates	January 31 st to February 3 rd , 2025 .
Language of Survey	The survey was conducted in both English and French.
Standards	Nanos Research is a member of the Canadian Research Insights Council (CRIC) and confirms that this research fully complies with all CRIC Standards including the CRIC Public Opinion Research Standards and Disclosure Requirements. https://canadianresearchinsightscouncil.ca/standards/

Element	Description
Weighting of Data	The results were weighted by age and gender using the latest Census information (2021) and the sample is geographically stratified to ensure a distribution across all regions of Canada. See tables for full weighting disclosure.
Screening	Screening ensured potential respondents did not work in the market research industry, in the advertising industry, in the media or a political party prior to administering the survey to ensure the integrity of the data.
Excluded Demographics	Individuals younger than 18 years old; individuals without land or cell lines, and individuals without internet access could not participate.
Stratification	By age and gender using the latest Census information (2021) and the sample is geographically stratified to be representative of Canada. Smaller areas such as Atlantic Canada were marginally oversampled to allow for a minimum regional sample.
Estimated Response Rate	15 per cent, consistent with industry norms.
Question Order	Question order in the tabulations appended to this report reflects the order in which they appeared in the original questionnaire.
Question Content	Topics on the omnibus ahead of the survey content included: Views on political issues, views on economic issues, defense spending, foreign relations with the United States, views on Canadian institutions, views on technology and automation at Canadian ports, views on lobbying and experiences with sports betting.
Question Wording	The questions in the preceding report are written exactly as they were asked to individuals.
